COMMITTEE REPORT
Date: August 13, 2019

Committee: Historical Landmarks Committee

Committee Mission:
Assist the Association in recognizing and preserving a water landmark at least 50 years old that has had a direct and significant relationship with water’s supply, treatment, distribution, or technological development.

Committee Activities:
An Historical Landmark application is currently underway for the Dean and Main Pumping facility, part of the Pennichuck Water system in Nashua, New Hampshire. The pumping station was constructed in 1900. Although the station is no longer in operating condition, it is in outstanding shape and has undergone recent physical renovation. This is a very deserving candidate for recognition. The application will be submitted to the Board of Directors for consideration by October of this year.

Potential Historical Landmarks within the states of Maine and Vermont are actively being pursued. Any assistance from Board members in the identification of potential landmarks would certainly be appreciated.

Committee Members:

George G. Palmisciano, P.E. Chairperson

**Future Activities**

1). Increase Committee membership. The goal is to have at least one member from each New England state. Assistance is requested of the Board in identifying and securing members of the committee from each of the New England states.

2). Recommend additional Historical Landmarks for designation. The long-term goal of the Committee is to make at least one recommendation per New England state per year.

3). I plan on remaining as Chair of the Committee for the next year. Hopefully, there will be a new Chair by the end of next year and the Committee will continue to search out deserving candidates for Historical Landmark designation within the New England region.
